EMBEDDED C PROGRAM TO DISPLAY “HELLO WORLD” MESSAGE

Objective :

1. To develop an Embedded C program for displaying the message “HELLO WORLD”.
2. To interface an LCD with the 8051 microcontroller and display the given message on the LCD.

Code:

```
#include <reg51.h> #include <stdio.h>
```

```
void main (void){
```

```
    SCON = 0x50; /* SCON: mode 1, 8-bit UART, enable rcvr */ TMOD = 0x20;
```

```
    /* TMOD: timer 1, mode 2, 8-bit reload */ TH1 = 0xFD; /* TH1: reload
```

```
    value for 9600 baudrate */
```

```
    TR1 = 1; /* TR1: timer 1 run */
```

```
    TI = 1; /* TI: set TI to send first char of UART */ while (1)
```

```
{
```

```
    printf ("Hello World ! \n ");
```

```
}
```

```
}
```

Output:
